

INCREASING BELT CLEANING EFFECTIVENESS

BEP5 Primary Belt Cleaners

The BEP5 blades are designed for extreme working conditions, high belt speeds, and material transport that need long lasting durability.

Our exclusive, patented "Bubble Back" wave profile provides visual indication of increasing wear at 20/40/60/80/100%, in addition to preventing the formation of worn polyurethane residues on the tip of the blade.

The BEP5 blades are mounted on split aluminum cartridges—making changes and maintenance easier, and are available in various blends of polyurethane for application specific usage.

With options of spring or pneumatic tensioning, the BEP5 blade maintains excellent surface pressure and performance throughout its lifespan.

FEATURES & BENEFITS

- Various blends of polyurethane for application specific usage
- Comes in 6-in. segments
- Belt Widths: 24-96 in.
- Tensioners: Spring, Pneumatic
- Equipped with double tensioning for better pressure distribution
- Blades are mounted on split aluminum cartridges make changing and maintenance easier
- Unique wave profile reduces blade-edge bull-nosing & maintains a sharp edge

Tensioners

SPRING TP-HD

For belt widths 24-54 in.

SPRING TP-XHD

For belt widths 60-96 in.

PNEUMATIC TP

For belt widths 24-96 in.
